All of our instructors have OEM qualifications and our class sizes are strategically coordinated so that each attendee will return with the most amount of hands-on experience. All courses include the following topics:

- » System Operation
- » Disassembly/Reassembly of Machines
- » Common Failures
- » Software Reloads (*when applicable*)

Skills obtained through equipment interaction include repair, part replacement, and performance assurance. Our courses are designed to increase the capabilities of clinical engineers in order to maintain ultrasound units. Each attendee will return with a personal copy of training material and a certificate of achievement. The tools learned from this course help technicians become more successful while interfacing with customers.

For information about other system model training or on-site training options,
call us at 1-800-248-4153.
